

AEROVOYAGE Spatial Concierge

FULL-STACK SYSTEM ARCHITECTURE WORK DIAGRAM

1. End-to-End Workflow & Event Pipeline

2. Frontend Architecture vs Backend Service Isolation

BookingModal.tsx & Lead Capture

Guest form validation, dual-column Stripe sandbox card, booking confirmation receipt.

travelDataService.ts

Open-Meteo real-time climate API and OpenStreetMap Nominatim geocoding.

3. Supabase Relational Database Schema

Table Name	Primary Key	Foreign Keys & JSONB Fields	Description / Purpose
destinations	city_slug (PK)	city_name, country, lat, lon, daily_rate, rating	Primary catalog of worldwide spatial destinations.
destination_details	id (UUID PK)	city_slug (FK), landmarks (JSONB), itinerary_days (JSONB)	Rich relational data: Charminar, Golconda, day schedules, best times.
reservations	id (AV-XXXX PK)	user_email, full_name, dates, amount_paid, stripe_intent_id	Confirmed guest booking records and lead capture persistence.
reviews	id (UUID PK)	city_id (FK), user_name, rating, comment, created_at	Real-time user feedback with dynamic average rating recalculation.
